

MINIMIS

Building the best wearable for 180m+ runners & cyclists

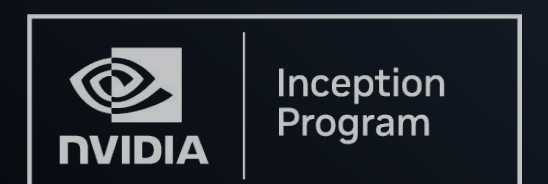

BACKED BY

+ANGELS & FAMILY OFFICES FROM

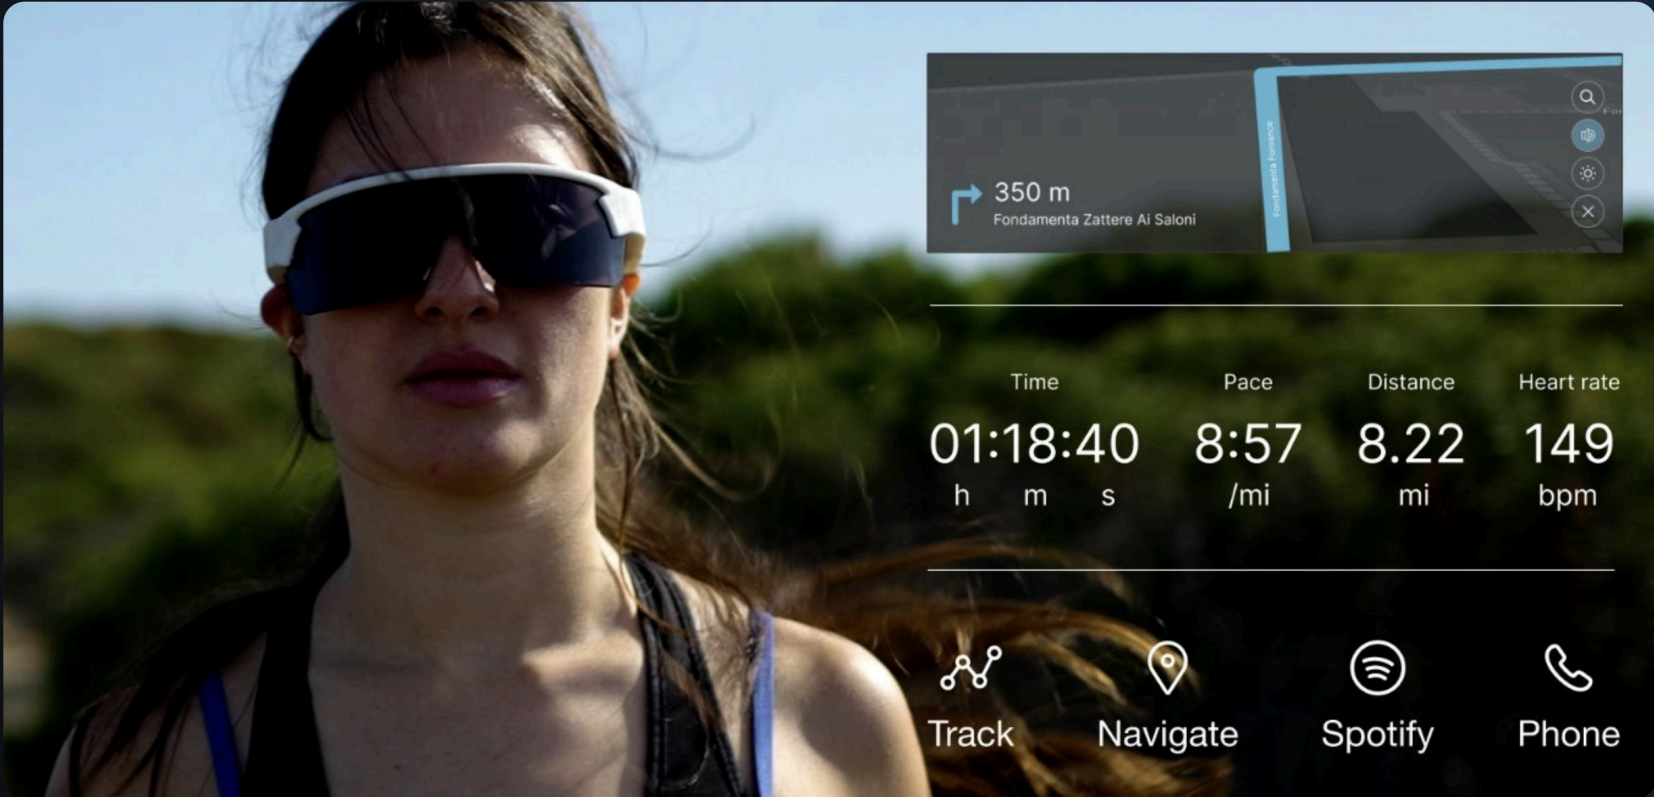

SUPPORTED BY

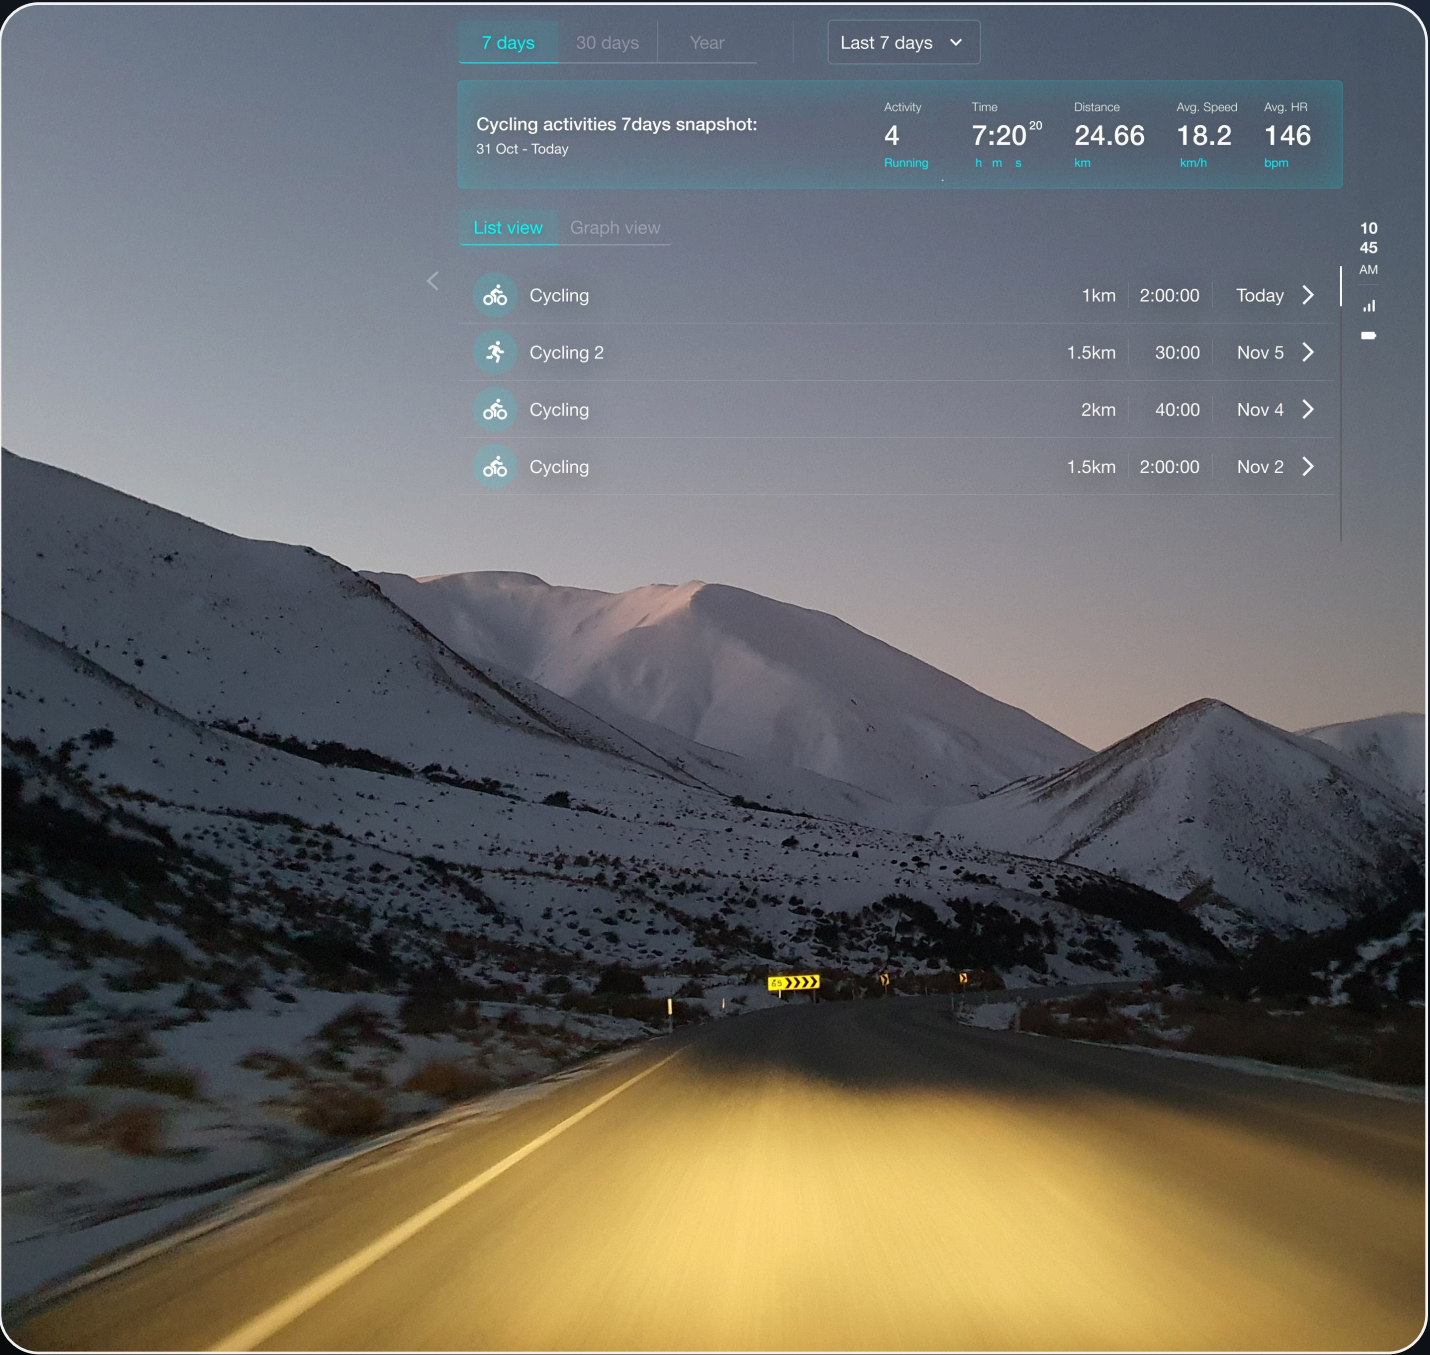

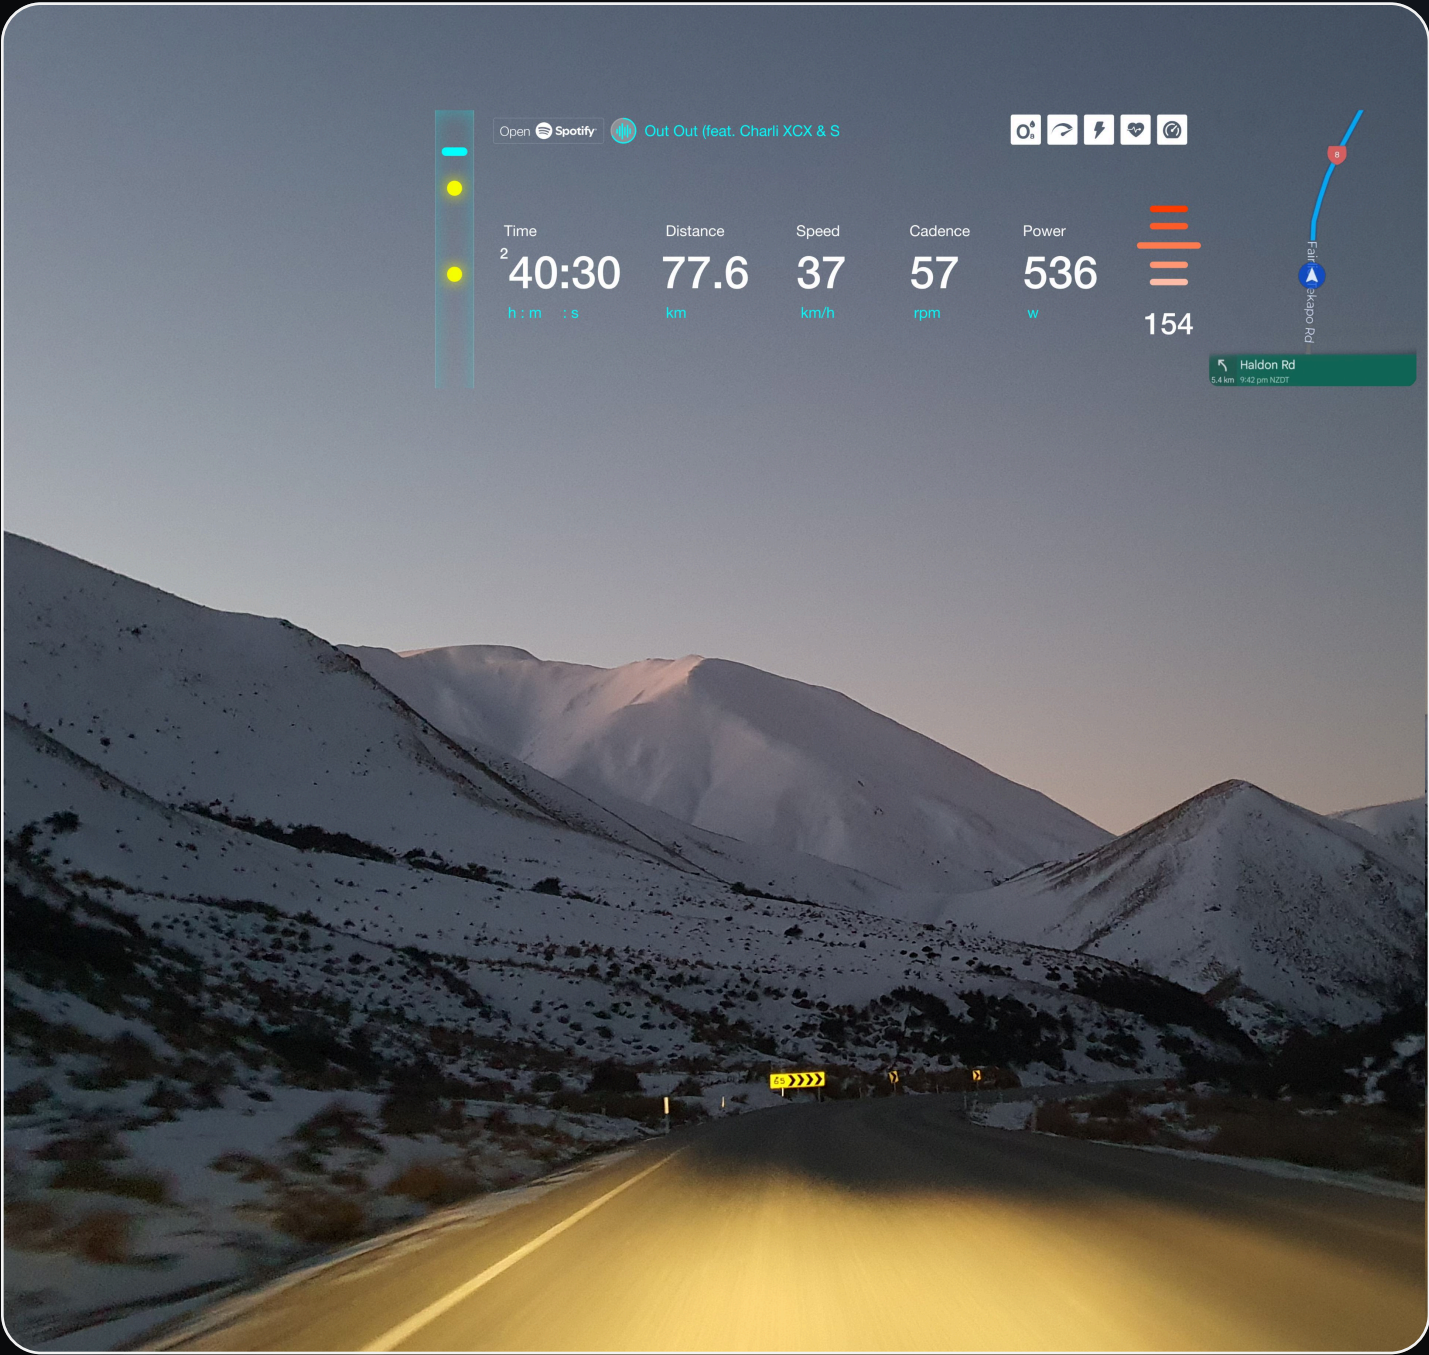

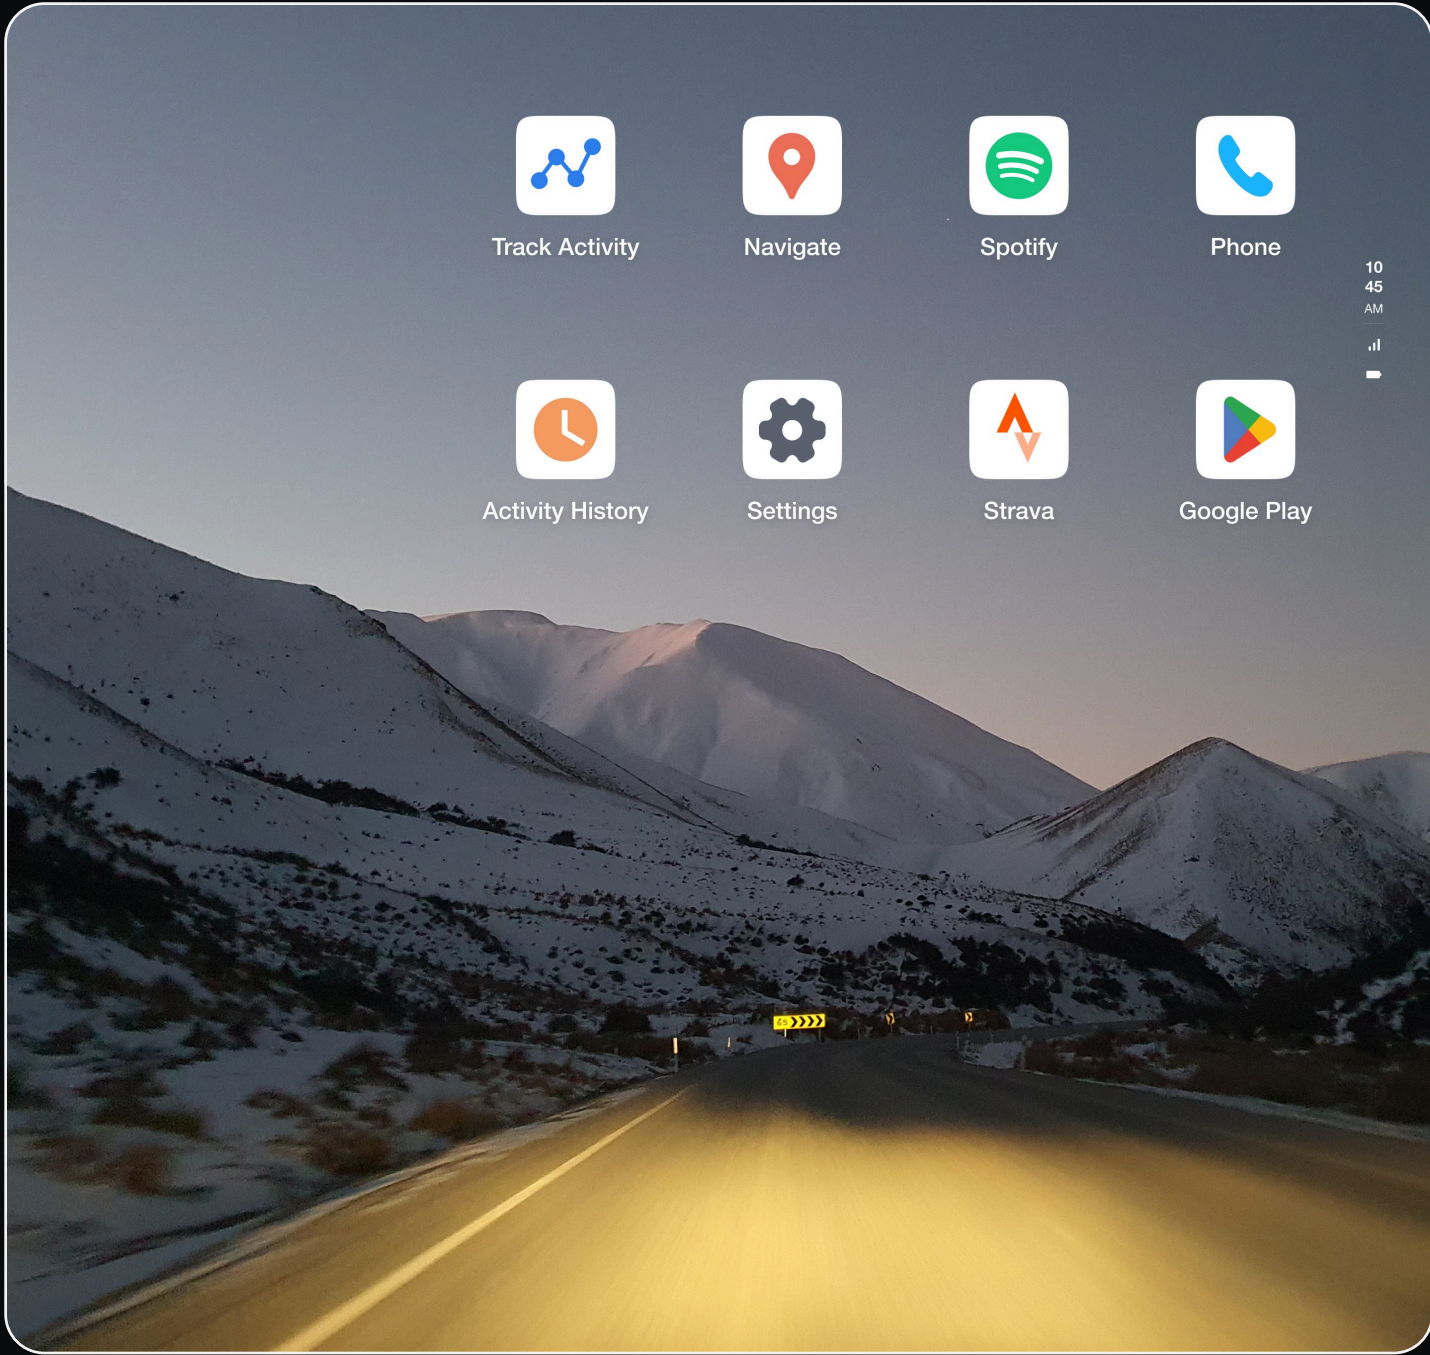

Standalone heads-up display, fitness tracker and bike computer within sunglasses. No more looking down and carrying multiple devices.

		
	Conventional Fitness Trackers	Minimis Flow AR
Performance	Awkward unnatural movements, tiny text on the move	Stats are clearly visible without unnecessary movement
Safety	Cyclists travel several metres blind when looking down at existing devices, leading to potential accidents	Navigation is viewable without taking eyes off the road
Ergonomics & Economics	Separate devices create added weight, imbalances and costs	Consolidates tracker, heart rate monitor and sunglasses into one

Designed closely with hundreds of athletes to overcome pain points with current wearables, we’ve created beautiful and highly functional custom Android OS that delivers a truly next-level and highly optimised athletic experience.

Traction

We have early signals of product market fit:

Here’s what some of our backers have said:

It fits ideally into a product I have been looking for and would use regularly

... so useful and the first real concept like it I’ve seen

... this is innovative technology and I want/need it

Minimis is the most feature rich

With proven leadership experience in corporate and startup environments, we're driven to build beautifully useful things that improves the enjoyment of real life.

Market

With a TAM of \$20.3bn now and \$31.3bn in 2034,¹ we’re disrupting the running watch, sports sunglasses and bike computer while creating a new category.

Just like how the smartphone made the MP3 player and windscreen GPS obsolete, we believe smart glasses will make bike computers and smart watches obsolete.

We estimate that 60% of the TAM is in US, UK, Australia, New Zealand, Canada & EU. Of these we estimate 20% of these are serious endurance athletes. Based on this we forecast the SAM to be \$2.44B.

We estimate that 0.75% - 1% of the SAM would hop on as early adopters in our first year to market, thereby bringing our first year SOM to \$18.3m - 24.4m.

¹ TAM based on market data from Business Insights Research, Future Market Insights & Towards Automotive on running watches, sports sunglasses and bike computers.

Why now?

AR tech is finally at a point where it's palatable for fashion-conscious consumers; yet it still relishes in obscurity.

We believe sports is the bridgehead it needs to reach mainstream relevance, because it provides a real use case to a large growing population beyond novelty.

4 in 10

People consider themselves runners²

54.7 million+

Americans cycle each year³

3 in 4

Consumers want AR beyond home and are willing to pay 20% more for portability⁴

New PinTILT AR display technology

Lighter, smaller, higher resolution, cheaper and more manufacturable than anything before

² Research from Nielsen Sports based on 8414 interviews collected across 10 Australia, Colombia, France, India, Japan, Kenya, Mexico, South Africa, UK, USA, conducted April 2021
³ Research from Statista, 2022
⁴ Research from our partner Ericsson ConsumerLabs, 2024, in a study of 10,000+ early adopters across 10 countries. 'This shift mirrors the historical trajectory of the telephone, AR/MR devices are poised to transition into everyday accessories akin to smartphones'.

50%

Margin on Flow AR

Flow AR sells for \$699 through direct and retailer channels

Platform-based design allows for efficient development of Flow AR 2 and variants

80%

Margin on Charging Case

Accessories like charging cases and prescription inserts offer higher margins

Sports-specific versions in planning: Golf AR, Swim AR, Snow AR

98%

Margin on Prescription Inserts

We are exploring a battery extension strap, targeting 2027, which may generate additional revenue if developed and launched successfully.

Optional software subscriptions for analytics and coaching

	MINIMIS FLOW AR 2 The next generation of Minimis Flow AR with rear vision camera, bone conduction audio		MINIMIS GOLF AR Highly requested by golfers – AR glasses that display yardage, wind, distance, markers	
MINIMIS FLOW AR Q4 2026 Initial rollout of glasses with no eSIM, followed by release in Q1 2027 of eSIM + battery strap accessory worn at the back of the head to be separately purchasable		MINIMIS SNOW AR AR snow goggles that display speed, course, friend locations		MINIMIS SWIM AR Turn our land success towards the water. Repurpose our powerful hardware to be a fully standalone swimming goggles, without dependence on a fitness watch.

“One day, we'll look back at our old running watches and bike computers as relics of a bygone era. How the hell were we content with anything less?”

“The strategically positioned OLED microdisplay in the Minimis Glass... allows wearers to maintain focus on the road while staying informed and aware.”

STUFF DETECTIVE

“Groundbreaking innovation... a fusion of style and functionality... all integrated into a sleek and lightweight eyewear design.”

bless this stuff

“...groundbreaking smart glasses designed for athletes... engineered with precision for fitness enthusiasts”

“These smart glasses are out to replace all other fitness trackers”

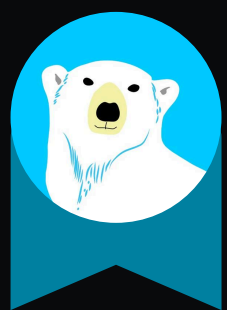

“As a unique offering in a market it is definitely filled with potential”

“Minimis Glass offers a new era for smart shades in fitness and tech. Say goodbye to clunky wearables and hello to seamless integration as these sleek glasses redefine functionality.”
